Reflection

This has certainly been an awesome project and I'm really enjoying putting the different parts together as a mockup my future app. Several different features were utilized in order for this to be success. I have also learned some key features in using the Balsamic wireframes for my mockup. The only challenge I encountered was saving my information. I had no way to save unless I spent \$100.00. I was able to get around it. The following controls were used on my screen.

Controls that were used:

As I put together this section, I used:

- Iphone
- Menu List
- Icons
- iPhone buttons
- Sub-menu
- Search options (Find A Doctor)
- Calendar Icon for setting appointment.
- Checkbox and forms
- Cascading so that users can send to appropriate department when sending emails
